

SY2019 This is (Not) About Drugs

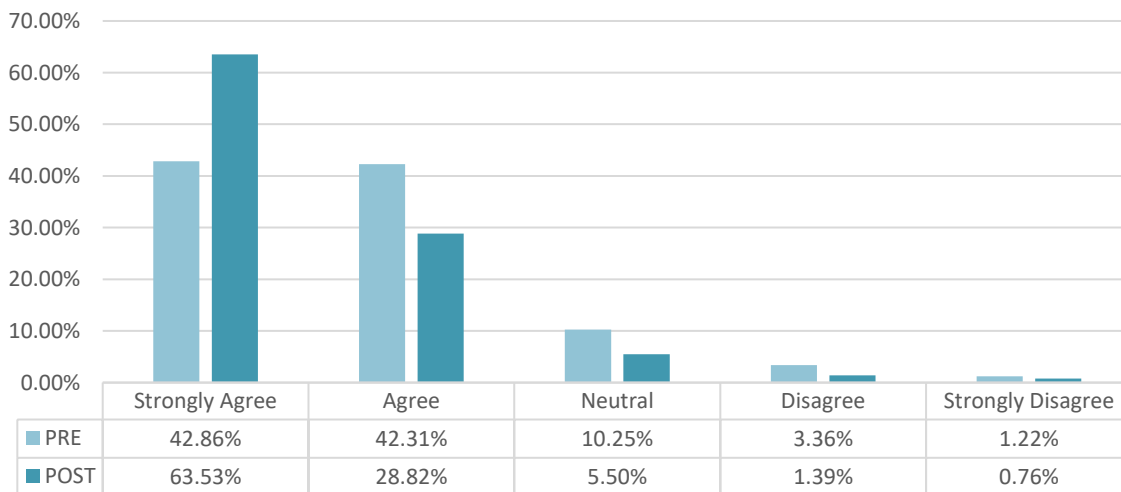

Prescription pain pills such as Hydrocodone, Oxycodone, and Vicodin are the SAME TYPE of drug as heroin.

Overdose ONLY happens with heavy drug use.

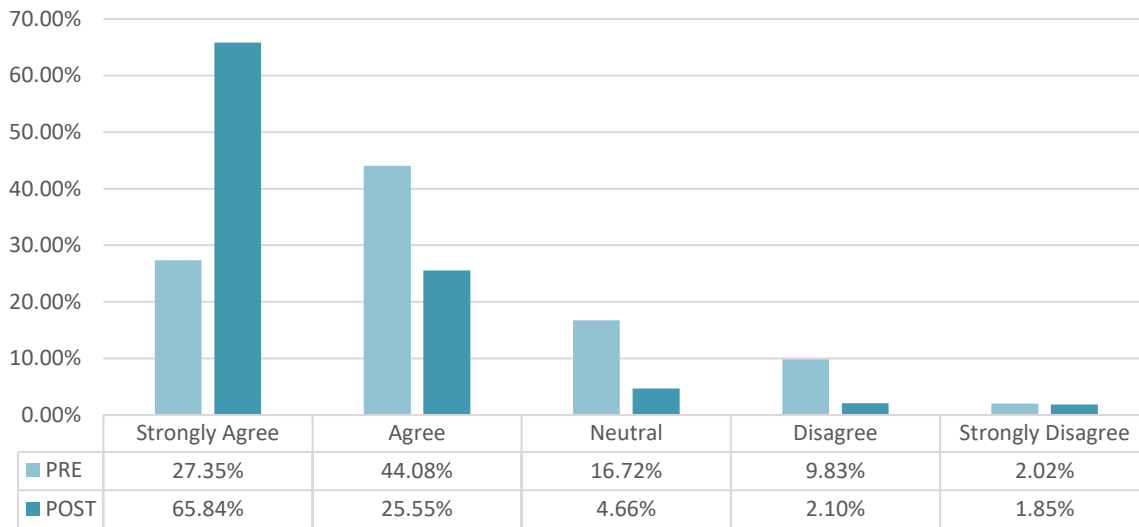

The younger someone starts drinking alcohol or using drugs INCREASES the risk of addiction or alcoholism.

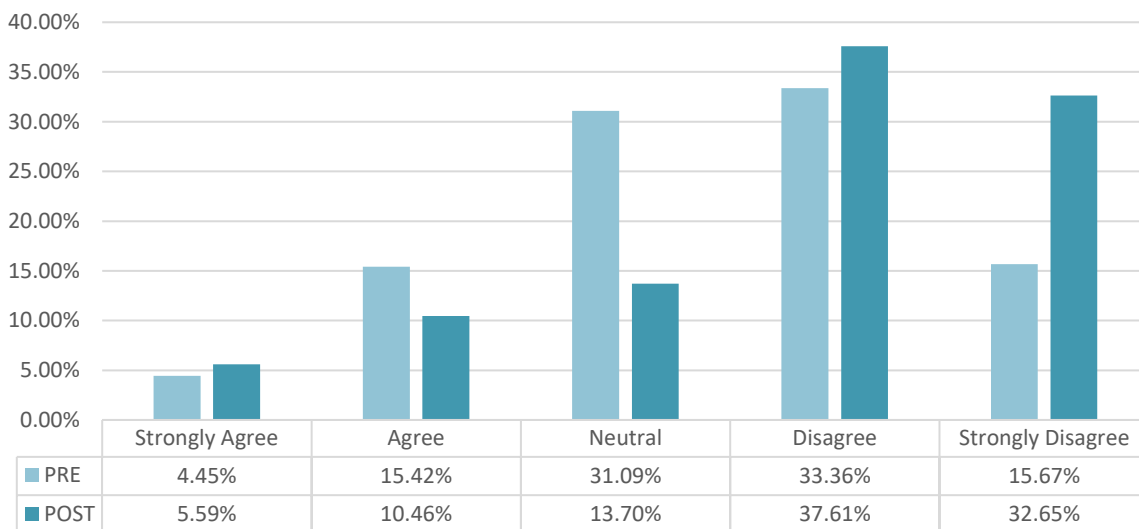

SY2019 This is (Not) About Drugs

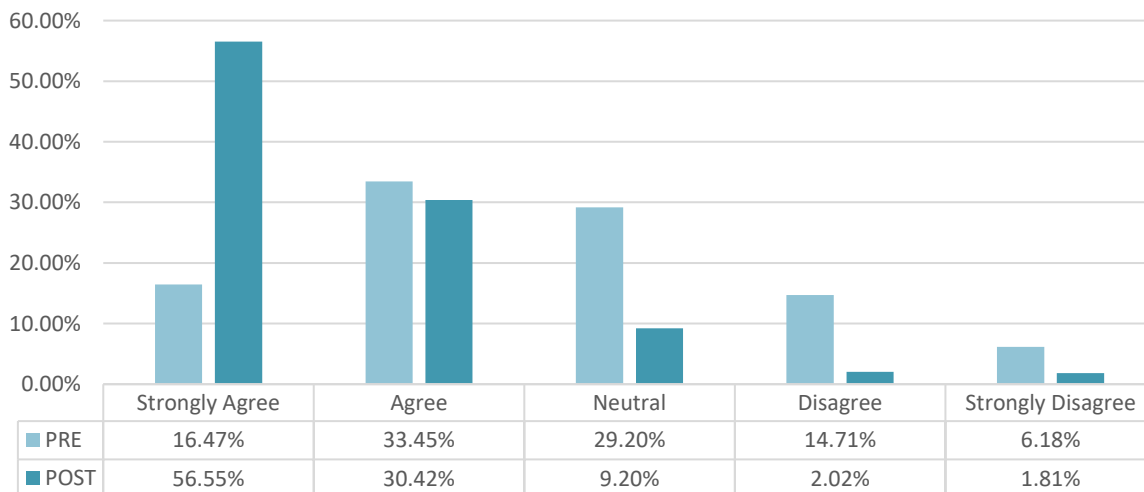

Prescription pain pills not prescribed to you are AS RISKY as using heroin.

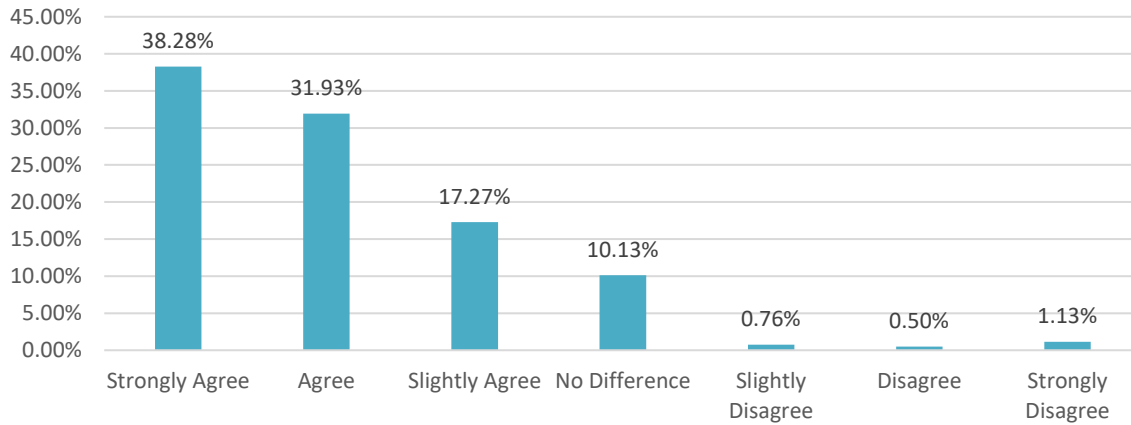

I WOULD NOT be able to recognize if someone was having an overdose.

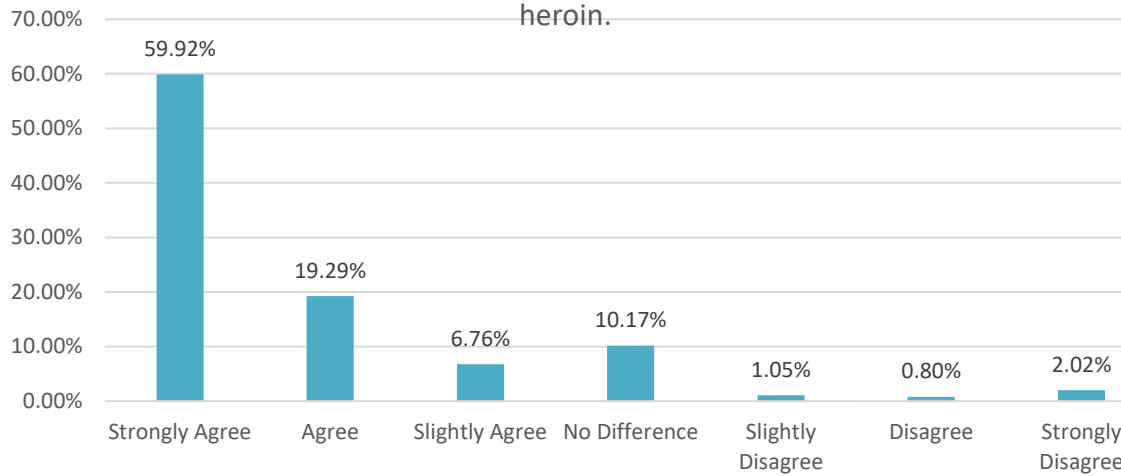

Drinking alcohol, using marijuana or other drugs INCREASES the likelihood that someone would use heroin.

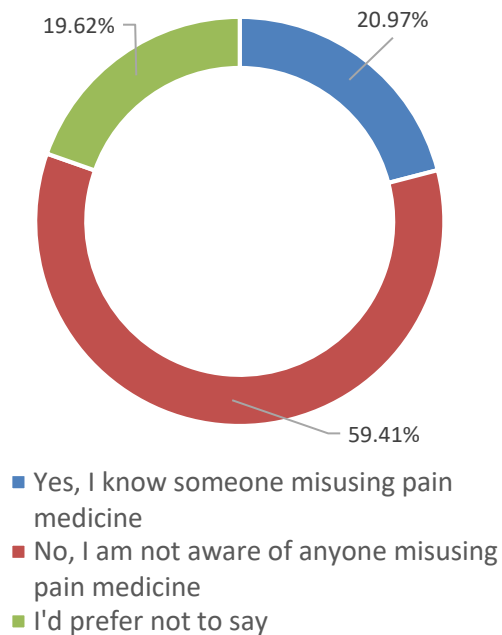

I am more likely NOW to talk to someone if I am concerned about myself or someone else.

I am less likely NOW to misuse prescription pain medicine or use heroin.

I know someone that is misusing prescription pain medicine.

How would you rate the lesson in presenting information that is helpful?
